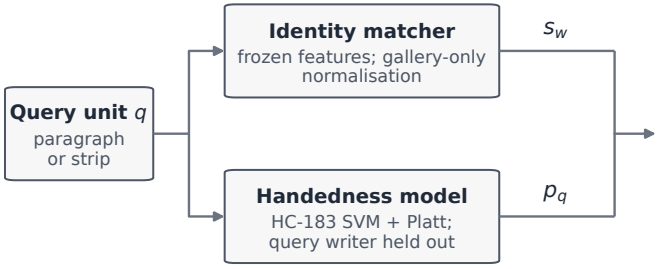
**(a)** Paired design: fixed gallery and identity scores, six ranking rules



| | Ranking rule | Information supplied to the ranking |
|---|---|---|
| ■ | Identity only | identity scores $s_w$ (baseline) |
| ■ | Known hand | true query and gallery hands (oracle) |
| ■ | Random partition | known arbitrary 21/21 split (benchmark) |
| ■ | Hard filter | predicted hand ranked first |
| ■ | Fixed fusion | $s_w/T + \log p_q(h_w)$ |
| ■ | Nested fusion | $s_w/T + \lambda \log p_q(h_w)$, $\lambda$ from development writers |

*Endpoint: paired top-1 change versus identity only, equal writer weights*

**(b)** Questions answered in sequence
