(a) Paired design: fixed gallery and identity scores, six ranking rules

	Ranking rule	Information supplied to the ranking
■	Identity only	identity scores s_w (baseline)
■	Known hand	true query and gallery hands (oracle)
■	Random partition	known arbitrary 21/21 split (benchmark)
■	Hard filter	predicted hand ranked first
■	Fixed fusion	$s_w/T + \log p_q(h_w)$
■	Nested fusion	$s_w/T + \lambda \log p_q(h_w)$, λ from development writers

Endpoint: paired top-1 change versus identity only, equal writer weights

(b) Questions answered in sequence
